

Direct comparison of the Gen 1 & Gen 2 Coral Colour lens

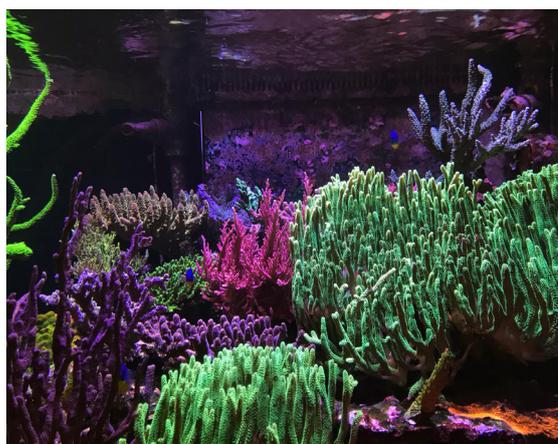

NO LENS

WITH MACRO ONLY

15K - GEN 2 LENS WITH CPL

20K - GEN 2 LENS WITH CPL

15K - GEN 1 ORANGE LENS

20K - GEN 1 ORANGE LENS

15K - GEN 1 ORANGE + YELLOW LENS

Conclusions: The effect of the macro lens is not significant, and the relatively short focal length only allows it to be used for items at the front of the tank. The zoom function on most smart phones will reproduce this, without focal length limitations, and so it is no longer supplied with the Gen 2 version of the lens kit.

The Gen 2 single lens with combined CPL filter, (Circular Polarising Lens), gives better colour rendering at both 15K & 20K spectrums and is more representative of what the eye sees when viewing the aquarium. The yellow lens gives a 6K daylight view and is no longer supplied with the Gen 2 version of the lens kit.
