# It takes years of experience to create the perfect aquarium design

D-D has always been at the **forefront of modern reefkeeping** and involved with some of the **best reef aquariums** in Europe. We have drawn on over 120 years of combined knowledge and experience in reefkeeping and aquarium production to develop and build what we believe is the **perfect affordable systemised reef aquarium**.

### Silence is golden.

A key requirement for any good modern aguarium, is for it to run as close to silently as possible.

By installing our proven twin pipe overflow system we eliminate almost all water noise whilst incorporating a safety bypass to remove the risk of flooding.

6

for maintenance.

### Create Your Perfect System

uitable for keeping S Corals, LPS Cora oft Corals and foi

#### Aguarium

- 1. Crystal clear, braceless aquarium with fully polished edges to provide an unimpeded view of your own personal reef.
  - Balanced width to height ratio to enhance viewing, aquascaping and ease of coral placement.
    - 2. Unique "Invisible weir box" design which disappears into the back of the aquarium.
    - 3. Multi-stage weir design provides a high turnover rate in the tank whilst minimising drain down levels in a power loss situation.
    - Special "Ultra-Flow" weir comb allows 30-50% more water through, so that larger pumps can be used.
    - **4**. Twin overflow pipes with an adjustable valve offers safe and whisper quiet operation.
    - 5. "Dry Box " built into weir section to hide and pass through any pump and lighting cables.
    - 6. Perfectly matched for use with the D-D Slimline lighting bracket and Aqualllumination lighting.

### Cabinet

- 7. Sleek, extra tall cabinet that offers the perfect viewing height for the aguarium whilst providing extra internal space for installation of any equipment.
- Cabinet supplied **pre-assembled as standard** with lacquer coated, fully adjustable, soft close hinges.
- Modern, ultra heavy duty cabinet, with high quality finish to compliment the home environment & adjustable feet (8) to allow correct levelling of the aquarium on uneven floors.
- Good ventilation is incorporated into the chiller and sump areas and removable, quick release, folding or bi-folding doors offer improved access
- Separate chiller section with storage shelf is included on the larger models.

As hobbyists, with each new aquarium that we own we learn how to identify and improve small details in the design and incorporate these ideas into our next "perfect system".

With the D-D Reef-Pro Aquarium we have taken decades of continuous improvements and incorporated them into our own version of the "perfect systemised aquarium", affordable and suitable for both beginners or advanced aquarists.

The flexible design provides an easy to use robust system that can be tailored to suit even the most demanding aquarist and includes all of the essential features required for keeping a successful aquarium.

By making the tank wider than it is tall we create a more balanced aspect ratio which greatly enhances the viewing experience, allowing easier and more natural aguascaping and coral placement.

### Filter Sump

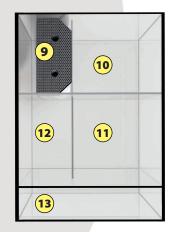

Our **"Dual flow "** multi chamber sump is compatible with most current reefkeeping methodologies. if you want to skim before or after the refugium then this sump design is flexible enough to accommodate both approaches.

**9.** Twin filter socks for super fine prefiltration of the water from the tank with filter sock silencing to remove any annoying trickle.

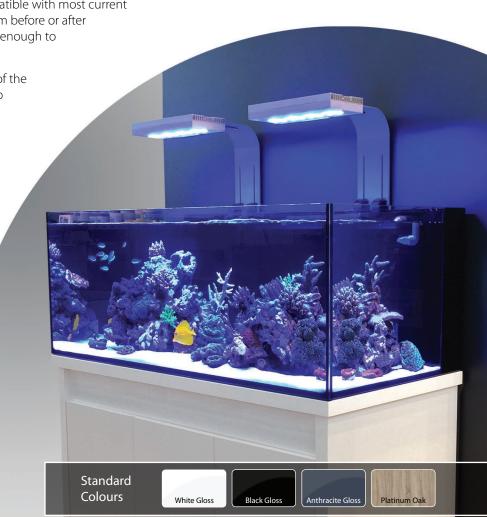

**10**. Large **skimmer / equipment** section.

11. Refugium section for caulerpa bed or for growing coral frags.

- 12. Pump chamber.
- 13. Large top-up reservoir.

### Sump Lavour

#### WE RESERVE THE RIGHT TO MODIFY AND IMPROVE OUR SPECIFICATIONS WITHOUT NOTICE.

Why not join our Facebook group to get inspiration and advice for your **D-D Reef Pro Aquarium**.

| www.fb.com/groups/ <b>ddreefpro</b> | ) |
|-------------------------------------|---|
|-------------------------------------|---|

The **D-D Reef Pro** Aquariums feature our special **ULTRA-FLOW** Weir Comb.

Maintaining high flow through a standard a weir comb isn't an easy task, weir boxes are usually designed to be as small and unobtrusive as possible and are normally restricted by a standard weir comb.

The **D-D ULTRA-FLOW** removable weir comb features horizontal and vertical drain slots allowing around 30-50% more water flow compared to a standard overflow comb. The higher flow through the weir comb also allows for higher output return pumps to be employed.

We even supply a spare comb section for use during cleaning.
